WHY CHOOSE DOOSAN EQUIPMENT?

Doosan® products are known for reliably exceeding customers’ most demanding expectations and are designed to perform in the most difficult working conditions. It’s why we’re one of the fastest-growing equipment brands in North America.

WHEN YOU CHOOSE DOOSAN EQUIPMENT, you’ll have the backing of a strong, global organization – with benefits that extend far beyond the capabilities of a new machine.

Throughout its years in the equipment industry, Doosan has listened to its North American customers, making many improvements – and developing new machines – as a result of feedback from owners and operators. Since 2005, Doosan has grown from its position as the seventh-largest construction equipment manufacturer in the world to the fifth largest.

YOUR NORTH AMERICAN PARTNERS

Throughout our decades of selling equipment in North America, we’ve been building a network of dealers designed to surpass customer service standards. From coast to coast, there’s a solid infrastructure to support you and your equipment; including parts distribution centers in Seattle and

Atlanta, service training and product management in Georgia, sales training at The ROC customer experience facility in Arizona and attachment design and development in Minnesota.

OUTSTANDING WARRANTY

Customers choose the months and hours of coverage in their transferable warranty. Options include a standard warranty of 12 months or up to 1,500 hours (depending on the machine), or up to the five-year, 7,500-hour Protection Plus® coverage for the powertrain only, the powertrain plus hydraulics or the full machine.

HISTORY

Founded in 1896, Doosan is a strong, stable and global company with a long legacy in infrastructure support. Its history in equipment manufacturing began in 1937 as Chosun Machine Works (now Doosan Infracore), Korea’s first large-scale machinery factory, with the first facility built in Incheon, South Korea. Today, at an expanded Incheon campus as well as a facility in Gunson, South Korea, Doosan produces excavators, wheel loaders, log loaders and material handlers. Articulated dump trucks are built at the Doosan manufacturing facility near Elnesvågen, Norway.

DOOSAN MINI EXCAVATORS TAKE ON MAJOR CHALLENGES.

Doosan mini excavators deliver big performance in a lightweight, powerful package that fits where bigger machines can't.

Featuring an optimal balance between engine horsepower and hydraulic force, these hard-working machines bring predictability, precision, speed and more to the most challenging tasks in the most confined jobsites. Get the productivity and performance you demand, the versatility your jobs require, the durability you rely on and the comfort your operators expect.

Standard Arm or Long Arm

- The standard arm gives you maximum breakout force and lifting ability.
- If you need more reach and dig depth to avoid machine repositioning or to make loading trucks faster and easier, equip your machine with the optional long arm (available on select models).

Impressive Lift-Over-Side Capacity

The track system design delivers added stability and an integrated counterweight, allowing operators to dig with confidence.

Built-In Comfort

The excavator's sturdy body panels and tight latches reduce vibration in the cab. A smooth, stable ride, along with a wide seat and ample floor space, improves operator comfort and productivity.

Excellent Visibility

Doosan® mini excavators offer expansive glass surface area and top window, to provide optimal visibility to the work.

Visibility Advantages

In an excavator, the operator sits to the side of the boom for a clear view of the bucket or attachment. Get used to leaning around the boom to see properly on a TLB.

Track Advantages

A tracked undercarriage gives you superior flotation and traction on sensitive or soft surfaces that would stop a TLB. Less ground disturbance also cuts down on time-eating, profit-reducing repairs to driveways or finished landscaping.

Cost Advantages

Mini excavators offer better fuel economy and lower costs overall, and still provide the performance you demand for the job. Doosan excavators achieve more with smaller displacement engines, boosting productivity while using less fuel over the course of an entire day's work.

Better Than a Tractor Loader Backhoe (TLB)

Mini excavators often outwork larger TLBs that appear more powerful on paper. Where a TLB has a limited swing of 180 degrees, the house of your mini excavator swings 360 degrees, continuously rotating for faster and more flexible spoil placement, better visibility and less repositioning on tight-fitting jobs.

Swinging Against Obstacles

A tractor loader backhoe is often limited to just 45 degrees of work group movement when you're up against an obstacle. With 180 degrees of movement, the excavator provides more freedom for placing spoil or loading trucks.

An independent boom swing enables offset digging – for square holes or digging around buried utilities – without repositioning. That's virtually impossible in a TLB.

Zero Tail Swing or Conventional Tail Swing

- A Zero Tail Swing (ZTS) or minimal tail swing excavator is generally wider than a conventional swing excavator. Consider conventional if you need to gain access through a gate.

- A ZTS or minimal tail swing excavator provides more unrestricted rotation and greater flexibility if you work close to objects or against walls.

With a closed center valve, piston pump, load-sensing hydraulics and cushioned cylinders, Doosan mini excavators are packed with high-end hydraulic components that deliver the performance you need for difficult work. What do you need? Predictability? Speed? Precise control? Doosan delivers it all, providing the optimal balance between engine horsepower and hydraulic force to get the job done efficiently.

Powerful Performance

Efficient torque-limiting piston pumps respond to load demands, delivering arm and bucket forces that meet the challenge of your most difficult jobs.

Smooth, Predictable Work Group

Doosan control valves provide smooth, predictable work group control, giving you precise movement that comes in handy during work in close quarters.

Don't sacrifice speed to get smoother operation. Doosan excavators deliver both. A unique control valve system and cushioned cylinders provide ample, consistent oil flow for the job for fast cycle times and a smooth, agile response to your commands.

Fingertip Control

A simple thumb switch on the right joystick controls auxiliary hydraulic functions making fine adjustments effortless and giving you improved efficiency and greater comfort throughout the day's work. A thumb switch on the left joystick – not foot pedals – controls your boom swing. Not only is this style of control more comfortable to use, but it also brings better metering and improved multifunctioning to the job.

In-Track Swing Frame

The Doosan in-track swing frame design gives you the opportunity to get closer to your work when you're offset digging. Bring the excavator flush against a structure or obstacle. The swing castings and cylinders are positioned within track width, making it impossible to damage these components in tight areas while protecting structures and obstacles from damage as well.

With quick cycle times, efficient designs and plenty of power, a Doosan excavator helps you fit more work into fewer hours.

Auto Idle

To reduce noise, improve jobsite communications and save fuel, this standard feature idles your engine automatically when machine functions are not used for a few seconds. When you move the controls, the excavator automatically returns to your previous throttle setting.

Faster Cycle Times

When you're digging, dumping spoil into trucks or placing boulders, the difference is clear. Doosan® mini excavators get the job done faster. With cylinders sized precisely to match pump capacities, Doosan excavators always achieve best-in-class cycle times.

Strong Work Group

The Doosan work group is built tough to ensure a long, productive life for your machine and require less routine maintenance. It's also designed with room for the addition of secondary auxiliary hydraulics. If you need them, you can install a second auxiliary hydraulics option with less effort and lower cost. (Models DX35-5, DX42-5K, DX50-5K)

Tier 4 (T4) Compliance

Optimized to provide the ultimate in power delivery and fuel economy, Doosan mini excavators feature T4-compliant engines to reduce air pollution.

Auto Downshift

When turning, pushing and maneuvering, auto downshift reduces the hydraulic flow – so the machine doesn't bog down during travel. When the load decreases, the excavator automatically shifts back into high range.

Backfill Blade

The versatile backfill blade levels, backfills, grades or pushes material with ease. Controls include a convenient blade float feature.

Angle Blade Option

An angle blade is important for fast backfilling and grading, allowing you to angle your backfill blade 25 degrees left or right. You can direct spoil from one side of the blade to the other without forming windrows on both sides of the blade. (Models DX35-5, DX42-5K, DX50-5K)

Your reputation depends on a reliable, durable machine, and Doosan® excavators are designed to be ready when you are. They're protected with solid construction and smart design you can see. They're loaded with heavy-duty features that keep you running longer in the field — so you spend less time in the shop and more time making money.

Integrated Slew Brakes

This feature gives you infinite brake positioning for easier trailer loading and positioning.

On-Board Diagnostics

Efficiently troubleshoot problems in the field and prevent downtime before it occurs.

Automatic Glow Plugs

Automatic glow plugs warm the fuel mixture for faster starting in cold weather. They also ease wear and tear on your engine and starter.

Easy Machine Tie-Down

Stop searching for difficult-to-reach tie-downs. Secure your excavator fast and minimize your time getting on and off the worksite.

Tough Hoses and Smart Routing

Doosan steel hydraulic lines stand up to difficult work better than rubber hoses. They're routed through the lower portion of the boom swing casting and securely through the top part of the boom structure — where they're best protected from wear, tear and damage on the job.

A deluxe, adjustable seat with numerous perks and comfort features ensures that operators stay productive and push performance to the limit in Doosan® excavators. Easy to enter, exit and work in, Doosan cabins give you great visibility and remarkable standard features that bring superior comfort and better productivity.

Models DX63-3, DX85R-3

Large Cab

Doosan gives you more comfort for long hours of operation. The DX42-5K and DX50-5K have a 15% larger cab than previous models. Flip-up foot pedals provide extra foot space when needed. Adjustable arm rests move precisely where you're most comfortable. Lockable storage keeps your personal items secure and out of the way.

Models DX42-5K and DX50-5K

Quiet Operator Environment

The quiet engine, along with its solid construction and use of innovative, noise-reducing materials, makes the job more enjoyable every day. Auto idle makes it even easier to be heard or to hear your co-workers by idling the engine automatically after four seconds.

Flexible Controls

Select an ISO or BHL control pattern. To make grading, leveling and backfilling as easy as possible, the blade float feature puts consistent down-pressure on the blade to follow the contours of the ground without operator input.

Standard Radio

Doosan cab-enclosed mini excavators are equipped with a radio and an audio input jack that's ready for your MP3 player or other device.

Standard Deluxe Instrument Panel

- Eco Mode Capabilities*
- Enhanced machine vitals
- Nine programmable passwords
- High-resolution graphic display
- Attachment operating screens
- Integrated keyless start
- Diagnostic screens
- (Models DX42-5K and DX50-5K)

**Eco Mode allows you to optimize fuel efficiency.*

Automotive-Style Heat and Air Conditioning

Fight extreme weather and stay comfortable all year long with high-capacity heating and cooling vents and easy-to-control temperature. Automatic temperature control senses and adjusts to the temperature setting. A memory function returns it to your preferred temperature if you shut the machine off and restart later.
(Models DX63-3, DX85R-3)

Even the best equipment needs regular maintenance. Doosan makes it easy to care for your excavator with onboard diagnostic systems and easy component access. If you want a machine that lasts, with minimal effort, Doosan delivers everything you need.

Easy Component Access

Easy-to-find access panels open from the sides of the excavator.

Battery Disconnect Switch

Convenient battery disconnect completely disables your battery connection, protecting the battery life during extended storage periods. It can also provide an added measure of security on the jobsite after working hours.

Models DX63-3, DX85R-3

Run more and service less. See more Doosan ease-of-maintenance features at Na.DoosanEquipment.com

LCD Self-Diagnostics

An LCD monitor helps you track critical systems in real time and access historical machine alerts from within the cabin.

Models DX63-3, DX85R-3

Models DX42-5K and DX50-5K

Centralized Boom Swing Cylinder Greasing

Daily maintenance is critical — and it's simple with the centralized grease banks.

Color-Coded, Labeled Wiring

Wiring in the machine is labeled for easy service, fast troubleshooting and simple installation of electronic accessories — like the rotating beacon. (Rotating beacon only available on DX63-3 and DX85R-3.)

Doosan excavators are made to do more because they are optimized for attachment versatility. Attachments designed for your excavator's operating weight can be matched to your excavator and you can easily increase your utilization.

Auxiliary Hydraulic Lines

Auxiliary hydraulics are configured with flush face couplers to make quick, easy hose connections when using hydraulic attachments. *(Models: all)*

An optional diverter valve* allows hydraulic thumb hoses to remain connected when other hydraulic attachments are installed. *(Models: DX42-5K and DX50-5K only)*

Thumb Ready

Durable clamp mounts are integrated into the arm. There's no welding required to add a clamp.

Fingertip Controls

Auxiliary hydraulic controls are fingertip controlled to deliver precise positioning and easy operation. Variable flow and detent provide more functionality for using different attachments.

Optional Quick Couplers

Quick couplers increase your machine's versatility and improve your productivity when your work includes switching attachments.

Shorter Tail Swing

For confined spaces, especially in urban environments, a shorter tail swing profile can make it easier to maneuver without sacrificing performance. *(Models: DX35-5, DX50-5K, DX62R-3, DX85R-3)*

Attachment-Ready

Doosan mini excavators provide immediate multi-attachment functionality without additional installations or modification. Take on different jobs and expand your investment by doing more with your machine.

CHALLENGING JOBS COME IN ALL SIZES.

Doosan offers an expanded lineup of excavators, including mini excavators, so you're always ready for the next challenge.

Mini excavators deliver fast cycle times and excellent hydraulic flow to make you more efficient. An in-track swing frame allows you to get closer to your work. Extended service intervals and on-board diagnostics help you maintain your machine. A larger cab and deluxe adjustable seat improve comfort for all day work.

NOTE: Where applicable, dimensions are in accordance with Society of Automotive Engineers (SAE) and ISO standards. Specifications and design are subject to change without notice. Pictures of Doosan® excavators may show other than standard equipment. All dimensions are shown in inches. Respective metric dimensions are enclosed by parentheses. Doosan equipment is manufactured with a Quality Management System that is in compliance with ISO 9001:2008. All dimensions are given for Doosan excavators equipped with standard tracks and the standard front as listed. Rounding may result in specifications having the same imperial value, but different metric values.

Specifications

Lifting Capacity

- Load point is the end of the arm.
- Capacities marked with an asterisk (*) are limited by hydraulic capacities.
- Lift capacities shown do not exceed 75% of minimum tipping loads or 87% of hydraulic capacities.
- The least stable position is over the side.
- The total mass of machine includes the mass of the boom, arm, counterweight, all operating fluids and a 75 kg operator.
- Lift capacities are in compliance with ISO 10567.
- Backfill blade in up position unless otherwise noted.
